FARM AND HOME.

Leaves for Flavoring.

With the exception of sweet and bitter herbs, grown chiefly for the purpose, and parsley, which is neither bitter nor sweet, but the most popular of all flavoring plants, comparatively few other leaves are used. Parsley I ought also to except the sweet bay, which is popular in rice and other puddings, and certainly imparts one of the most pleasant and exquisite flavors; but, on the other hand, what a waste there is of the flavoring properties of peach, almond, and laurel leaves, so richly charged with the essence of bitter almonds, so much used in most kitchens! Of course such leaves must be used with caution, but so must the sprigs as well. An infusion of these could readily be made, either green or dry, and added, or table-spoonful of the flavoring liquid used. One of the most useful and harmless of all leaves for flavoring is that of the common syring. When cucumbers are scarce, these are a perfect substitute in salads or anything in which that flavor is desired. The taste is not only like that of cucumbers, but identical—on a curious instance of the correlation of flavor in widely different families. Again, the young leaves of cucumbers have a striking likeness in the way of flavor to that of the fruit. The same may be affirmed of carrots, which are as like carrots in taste as may be. In most gardens there is a prodigious waste of every flavor in the sacrifice of the external leaves and the partially blanched stalks. Scores of stalks of celery are cut up into soup, when the outside would flavor it equally well or better. The young leaves of gooseberries added to boiled fruit give a fresher flavor and a greater color to pies and tarts. The leaves of the flowering currant give a sort of intermediate flavor between black currants and red. Orange, citron, and lemon leaves impart a flavoring equal to that of the fruit and rind combined, and somewhat different from both. A few leaves added to pies or puddings, or in the milk used to bake with rice, or formed into crusts or paste, impart an admirable and almost inimitable bouquet. In short, leaves are not half so much used for seasoning purposes as they might be.—Simmons' Waste Products.

Orchard and Blue Grass.

A Kentucky correspondent of the Southern Agriculturist writes: While I think there is no grass equal blue-grass, yet I like orchard grass in some respects better than blue-grass. In the first place you can graze it two weeks earlier in the spring, which is a very decided advantage over the blue grass. If you graze properly, its fattening qualities are equal, if not superior, to those of the blue grass. In the next place, if you have a good stand, it affords as much, if not more grazing to the acre, than blue grass. Again, I have seen blue and orchard grass in the same field or pasture growing side by side; a drought of some four or five weeks would cause the blue grass to become dry enough to burn, while the orchard grass will be green and luxuriant, comparatively speaking. This is an other very great advantage over blue grass.

New Kinds of Oats.

We have been shown, says a correspondent of the St. Albans Messenger, a sample of "bull-oats," by Jacob Smith of Newbury, who is introducing them as a new variety of oat culture in that state. They resemble the common oat after the hull is removed. In threshing, the grain comes out of the hull like wheat. Forty bushels have been raised to the acre at the west, and the grain weighs forty-eight pounds per bushel. The seed was brought to this country a few years since by a laborer from Belgium, who sowed it on a field left before it was harvested, so that nothing further is known of its history. It has claimed that the grain makes an excellent meal, superior to that usually obtained from the common varieties, at least in this country, and as this new acquisition can be raised successfully, it will be very useful for this purpose, as every farmer can easily raise sufficient for his own use, at least.

Pork Raising.

My own theory of pork raising, based upon experience, observation and probability, is a little philosophy of the thing, if written for the benefit of others, would be about as follows: During hot summer months, I would feed very little solid food, such as corn in the ear or unshelled feed. I would keep hogs upon green feed constantly, either grass, oats or rye, and feed them at regular intervals, once or twice per day, upon mashed feed, either shorts, chopped oats or rye, buckwheat, etc., fed in troughs. When fed in this way, and at the same time allowed to wallow in mud, hogs will bear the heat of summer with ease, and will be in the best of condition for fattening, which should commence about the first of September, when the new crop is still soft and tender. Treated in this way, hogs become probably as perfect as any method could make them. Upon the whole, too, I believe it the cheapest and most economical.—Cor. Germantown Telegraph.

About Sunflowers.

Sunflowers are rich in honey, and are consequently good neighbors for bees. Oil, hardly to be distinguished from olive oil by any one but an expert, may be extracted from the seeds, in the proportion of one gallon to one bushel. One acre will produce something like fifty bushels of seeds. The seeds, too, make food not unpalatable for human beings and very good for animals and poultry. The Portuguese and American Indians make a kind of bread from them, and roasted they may be ground and used as a substitute for coffee. The stalks may be used as bean poles while growing. Dry, they make possible roofs for sheds and the like, and burn rapidly on the hearth. The ashes are very rich in potash. Altogether it is a very useful plant, and, to crown all, it has a reputation which the scientists have never disproved, for absorbing malaria, and acting as an effectual screen against that scourge of low-lying districts—fever and ague.

Plant trees, says a poetical New Hampshire editor, adding: "A tree is a feather in the earth's cap, a plume in her bonnet, a tress upon her forehead; wherefore, plant trees."

It is thought absurd for a man to sit and wait for trade. Merchants in business do not, in fact, make large fortunes. "But," say some men, "I cannot leave my store to go about and stir up trade." Perhaps, indeed, he cannot, but he can send out his winged messengers of enterprise in the shape of such lively advertisements as will cause people to "stop and talk" with him before he is buying elsewhere. Advertisements are good scouts and first-rate skirmishers.

MISCELLANEOUS.

SIMMONS' LIVER REGULATOR.

THE FAVORITE HOME REMEDY.

This unrivaled Medicine is warranted not to contain a single particle of Mercury, or any injurious or harmful substance, but it will cure all diseases caused by derangement of the liver and bowels.

PURIFYING VEGETABLE.

Containing those Southern Roots and Herbs, which an all-wise Providence has placed in countries where Liver Diseases most prevail, it will cure all diseases caused by derangement of the liver and bowels.

Simmons' Liver Regulator, or Medicine.

Is eminently a Family Medicine; and by being kept ready for immediate resort will save many an hour of suffering and many a dollar in time and doctor's bill.

INTERESTING TO LADIES.

I HAVE A NEW AND VALUABLE INVENTION for the benefit of the Ladies, to be used in connection with the needle or Sewing Machine.

Self-Fitting Excelsior Cloth by the use of which a PERFECT FITTING DRESS may be obtained for any turn by measurement. This system cuts the base of all dresses and all other garments, and will be tight-fitting garments for Ladies and Children.

The Cloth is elegantly designed and simple in construction. It is not simply a piece of paper, but a perfect system of cutting, ready for use, with full instructions. With it any Lady can make her own Dress, Blouse, Petticoat, and other garments, without trying them on.

AGENTS WANTED. To whom special inducements will be offered. There is not only a rich opportunity for a travel, but also for those who desire to canvass their own city or village.

Come and see the extent of this system. Make your visit. I will give all things, and lead fast to the "gold mine."

Practical Dress-makers, Lady Canvassers, Ladies Sewing Machines, and others interested in the subject, especially invited to call and examine the

New Patent Self-Fitting Measure.
